## RAZIONALE

Il programma di questo evento, caratterizzato da un'analisi critica e condivisa (sia in senso multidisciplinare sia come faculty e audience) delle principali novità della letteratura internazionale in tema di neoplasie genito-urinarie, sia prostatiche, sia renali e uroteliali, tutte caratterizzate dal recente arrivo di nuovi farmaci e combinazioni terapeutiche, può essere estremamente utile e formativo per lo specialista interessato a tali patologie.

Unire questa visione critica delle novità conoscitive e terapeutiche ad un'esposizione sistematica delle strategie terapeutiche esistenti e alla definizione di nuovi scenari di trattamento (e non) porterà alla realizzazione di un evento formativo originale e pratico, coronato da una sessione finale sull'inserimento di tali novità nello "scenario attuale".
